Aligning DODD Claims with EVV Units

DODD Claims Per Service Date

(calculated by the provider)

EVV Data Per Service Date

(calculated by the system)

Total minutes recorded / 15

NOTE: If there are 8 or more minutes left, add 1 unit.

Total units billed x total staff

EXAMPLES

2 staff for
1 person
for 6 hours

DODD Billing: 2 staff = 24 units billed (using codes AMW or FMW)

EVV Calculation: 24 units x 2 staff = 48 total units needed from EVV

2 staff for
1 person
for 6 hours

EVV Recording: Both staff record start and end times in EVV (under HPC service)

Calculation: 720 minutes / 15 = 48 total units

2 staff for
1 person for
4 hours

DODD Billing: (16 units x 2 staff) + (48 units x 2 staff) = 128 total units needed from EVV

& 2 staff for
1 person for
12 hours

EVV Calculation: 1920 minutes / 15 = 128 total units

NOTE: EVV will assign units to the date of service. Providers do not need to clock out at midnight for overnight shifts.
